Language and Representations of Mental Illness: Teaching *Wintergirls* and *The Impossible Knife of Memory*

Dr. Kia Jane Richmond
Professor & Director, English Education
Northern Michigan University
Mental Illness Statistics

- The NIMH reports that **18.3% of all U.S. adults in 2016 had any mental disorder** (a mental, behavioral, or emotional disorder) in the past year. Prevalence higher in women than men (no report for transgender).
- Young adults ages 18-25 had a higher prevalence than adults over 26.
- **Between 2001 and 2004, lifetime prevalence of adolescents ages 13-18 between was 49.5% for any mental disorder.**
- Of those, approximately **22.2% had severe impairment** (according to DSM-IV criteria). Higher numbers correlate with older youth.
Mental Disorders in the DSM-5 include:

- Neurodevelopmental disorders (e.g., intellectual disabilities)
- Autism spectrum disorder
- Schizophrenia spectrum and other psychotic disorders
- Bipolar and related disorders
- Depressive disorders
- Anxiety disorders
- Personality disorders
- Trauma- and stressor-related disorders (e.g., PTSD)
- Feeding and eating disorders (e.g., anorexia, bulimia)
- Substance-related disorders (e.g., alcohol use disorder, opioid-related disorder)
- Attention-deficit/Hyperactivity disorder (ADHD)
- Obsessive-Compulsive disorder (OCD)
Feeding and Eating Disorders

Types of disorders include pica, rumination disorder, avoidant/restrictive food intake disorder, anorexia nervosa, bulimia nervosa, and binge-eating disorder. Each of these includes some type of persistent problem with eating or eating-related behaviors that results in changed ingestion or absorption of food and that negatively affects physical health or psychosocial functioning in a significant way.
ANOREXIA

Includes the presence of a fear of gaining weight or being fat, atypically low body weight, and a distorted view of one’s body weight.

Typically begins in adolescence.

Most common among females at a ratio of 10:1.

One subtype includes binge-eating episodes.

Can include apprehensions about eating in public, desires to exert control over one’s environment, feeling ineffective, and difficulty expressing emotions.
BULIMIA

involves repeated episodes of binge eating with a lack of control over stopping, inappropriate behaviors to prevent weight gain (e.g., purging, misuse of laxatives or diuretics, etc.), and a self-assessment that is excessively influenced by body shape and weight.

During binges, individuals tend to eat items they typically avoid and sometimes include a dissociative quality (not being aware of eating so much).
In young females, over a 12-month period:

Prevalence of anorexia – 0.4%
Prevalence of bulimia – 1-1.5%

Note:
Prevalence of binge-eating disorder – newly added to DSM-5 - 2.6%
Posttraumatic stress disorder (PTSD)

PTSD, is a trauma-related disorder and occurs in individuals who have either experienced or witnessed a traumatic event such as death, serious injury or accident, natural disaster, an act of terrorism or war, assault (e.g., rape or torture), or another violent or disturbing incident.

Symptoms of PTSD include

- invasive and involuntary memories of the event (e.g., flashbacks or nightmares); emotional detachment or avoidance of reminders of the event;
- negative thoughts or feelings about oneself or others;
- and increased arousal or negative reactions (e.g., irritability, angry outbursts, self-destructive behavior, increased startle responses, difficulty sleeping or concentrating).
PTSD

Females are more likely to have PTSD than their male counterparts (8% compared to 2.3%).

Approximately 5% of adolescents have met the criteria for PTSD in their lifetime.
Inspiration for My Research on Mental Illness in Young Adult Literature

British scholars Rose, Thornicroft, Pinfold, and Kassam’s (2007) essay, “250 Labels Used to Stigmatise People with Mental Illness.” They asked 14-year-olds what words might be used to describe someone who experiences mental health problems.
The following were most prominently used terms:

- Disturbed
- Nuts
- Confused
- Psycho
- Spastic
- Crazy
- Depression
- Disabled
- Mad
- Unpredictable
- Insane
- Loony
- Mental
- Schizophrenia
- Thicko
- Weird
- Different
- Freak
Laurie Halse Anderson’s *Wintergirls* and *The Impossible Knife of Memory*

**Wintergirls** (2009): Lia Overbrook, a high school senior whose symptoms of anorexia nervosa – and problems with self-injury – are exacerbated when her best friend from childhood, Cassie Parrish, dies from complications of bulimia. Overwhelmed by guilt for not answering any of Cassie’s thirty-three phone calls the night before she died, and haunted by a hallucination of Cassie that becomes more and more insistent that Lia starve herself, Lia relapses despite having received prior treatment for her eating disorder.

**The Impossible Knife of Memory** (2014): Eighteen-year-old Hayley Kincain and her father “drifted back and forth across the country in a dented eighteen-wheeler” before he decided Hayley needed to spend her senior year in a regular school, Belmont High School, his alma mater. Anderson’s novel pulls readers into Hayley’s life as a high school senior who experiences symptoms of anxiety while trying to cope with her father’s PTSD and comorbid alcohol and drug use.
Lia counts the calories of her food, and Anderson, using strikethrough font, allows readers to hear Lia’s censored thoughts about being hungry. When her stepmother, Jennifer, offers her various items for breakfast, Lia thinks, “Because I can’t let myself want them, I don’t need a muffin (410) [...] and waffles (180) make me gag.”

Lia experiences a disturbance in the way her weight and body shape are experienced. In Chapter 25, Lia sees herself in the mirror and notices that her “metabolism is slowing down again.” She sees “yellow bubbles of fat” floating under her skin and feels “disgusting again, weak.”

When she describes the second time she was admitted to New Seasons, Lia tells us she weighed 85 pounds, which was “not enough for stuffing a paper Lia girl.” Though they told her she had to gain weight, Lia told them her goal was 80 pounds.
Lia actively participates in self-injury, cutting her skin. In Chapter 17, Lia goes to the movies, sitting in the back of the theater, where she “takes the box of razor blades out of the bag” and thinks
::stupid/ugly/stupid/bitch/stupid/fat/stupid/baby/stupid/loser/stupid/lost ::
Lia “inscribe[s] three lines, hushhushhush, into [her] skin. Ghosts trickle out.”
Lia talks to her mother:
“This is ridiculous. I’m not that sick.”
“The inability to rationally evaluate your situation is a result of malnourishment and disturbed brain chemistry.”
“I hate it when you talk like a textbook.”
“I hate it when you starve yourself. I hate it when you cut open your skin, and I hate it when you push us away.”
“I hate it, too, […] But I can’t stop.”
“You don’t want to stop.”
Andy’s PTSD has been a part of Hayley’s world since he was discharged from the Army. She says she is old enough now to understand where her father got his limp and “why he screamed in his sleep and that something inside him was broken.”

A few days after we moved in, Daddy got unstuck from time again [...] All he heard were exploding IEDs [...] All he saw were body fragments [...] All he tasted was blood.”

In one flashback, Andy Kincaid remembers a bomb detonating while driving back to the outpost in Afghanistan: “Shock waves ripple through metal, glass, and flesh. Bone crumbles. Skin explodes. Nerves snap [...] I swim through the smoke. Private Stolzfuss still sits behind the wheel [...] She doesn’t have a face anymore.”
Hayley explains that her father is afraid of “bridge overpasses” and “toll booths” because they could be hiding “snipers.” He avoids “[d]umpsters or trash cans ‘cause they could be hiding an IED.” She says he “knows it’s stupid, but knowing doesn’t stop the panic attacks. Sometimes he won’t leave the house for days.”

Hayley is frustrated with her father’s behavior (Chapter 33) and tells him so: “You’re a mess, Daddy. [...] No job. No friends. No life. Half the time you can’t even take the dog for a walk without freaking out. [...] all you do is sit on your ass and drink.”

After her father’s friend, Roy, dies, Hayley comes home to find her father “curled into a ball” after having trashed the living room. He drinks heavily, and Hayley spends the night cleaning up broken glass and caring for Captain Kincaid. “His hands were bruised, the knuckles oozing blood, probably from punching the holes in the drywall [...] A monster had rampaged through the house.” “The thing under his skin took over his eyes and made them look dead.” “Finally, at 3:45 a.m., “he puked all over the carpet and finally passed out.” Hayley “Laid him on his side, put a bucket by his head, and threw a towel over the mess so the dog wouldn’t eat it.”
Language Analysis Activity: Close Reading
Language Analysis Activity: Close Reading

- Read the passage, paying attention to how the characters are described (who speaks?)
  - Physical characteristics
  - Emotional characteristics
  - Social characteristics

- Consider the language used by the characters (what do they say?)
  - What terms are used?
  - What do those terms mean? (denotation – definition; connotation – positive and negative associations with the words)
  - Is the language formal or informal? Is jargon used?
  - Consider the following aspects of language: pace, tone, structure (full sentences, fragments, run-ons); punctuation, spacing.

- Examine the assumptions underlying the language
  - What positionings can you identify based on the words used? (social; political; cultural; personal)
  - What beliefs can you identify based on the words used?
  - Is there evidence of stigma?

- What does doing this kind of analysis teach you about the characters, plot, and/or theme?
Assignments for Wintergirls and The Impossible Knife of Memory

VIDEO & RESPONSE
Before Reading
Watch a video related to anorexia or PTSD and post a question or comment about how the videos influenced your understanding of anorexia nervosa or bulimia nervosa, especially within the context of the novel as you start to read.

ADAM RIPPON
Dr. Matthew Shear
PTSD

CHARACTER ANALYSIS
During Reading
Choose one character to analyze based on his or her actions in the novel.

Identifying Character Traits Worksheet
Sample Character Traits
Assignments for *Wintergirls* and *The Impossible Knife of Memory*

**FIGURATIVE LANGUAGE ANALYSIS**

**During Reading**

Choose one of the chapters from the novel in which Lia Overbrook makes references to being a “*real girl*” (e.g., Chapter 006.00, Chapter 009.00, Chapter 010.00, Chapter 024.00, etc.).

Examine the use of figurative language (metaphor, simile, personification, hyperbole, alliteration, onomatopoeia).

Make a list of ways that the author employs figurative language and discuss the effects of its use.

**FIGURATIVE LANGUAGE ANALYSIS**

**During Reading**

Choose one of the vignettes from the novel in which Andy Kincain reflects on his experiences in Iraq (e.g., Chapter 20, Chapter 34, Chapter 45, Chapter 71).

Examine the use of figurative language (metaphor, simile, personification, hyperbole, alliteration, onomatopoeia).

Make a list of ways that the author employs figurative language and discuss the effects of its use.
Assignments for *Wintergirls* and *The Impossible Knife of Memory*

**ARTISTIC INTERPRETATION**

After Reading

Create an artistic interpretation of one of the themes in *Wintergirls* (e.g., body image/self-image, ghosts/spirits, liminal space [the “in-between”], connections to Sleeping Beauty/Persephone, winter, death, losing, illusion of control, etc.).

You may choose to represent the theme in a collage, drawing, sculpture, video, or other visual medium.

Write a memo about the theme, noting at least two places in the novel where evidence of the theme can be identified and describing your interpretation of the theme through visual means.

**ARTISTIC INTERPRETATION**

After Reading

Create an artistic interpretation of one of the themes in *The Impossible Knife of Memory* (e.g., pain of addiction, fidelity, forgiveness, effects of war, trust, etc.).

You may choose to represent the theme in a collage, drawing, sculpture, video, or other visual medium.

Write a memo about the theme, noting at least two places in the novel where evidence of the theme can be identified and describing your interpretation of the theme through visual means.
Let’s make some lesson plans!

Individually, freewrite about what kinds of issues you might want to emphasize in a lesson on one of Anderson’s novels and what CCSS ELA standards you might want to address. You might also consider how Wintergirls or Impossible Knife of Memory could fit into your current curriculum. Think about themes, characters, plot, issues, language, or style.

Working together in pairs, start with the end in mind.

• What goals do you want to achieve in your lesson (literary, language, emotional, social, cognitive)?
• What resources will you need (web-based, literature, research, video, music)?
• What will students do? What will the teacher do?
• How will you assess their learning (writing, project, speech, test)?

Thanks to Laurie Halse Anderson for her beautiful novels! Picture from 2007. 😊
Additional Resources

Coming Soon

Mental Illness affects approximately one in five American teens, and according to recent surveys, one quarter of young adult literature features characters with mental or psychological disorders.

Mental Illness in Young Adult Literature

Exploring Real Struggles through Fictional Characters
Kia Jane Richmond
1 VOLUME

This book explores how mental illness is portrayed in 21st-century young adult fiction and how selected works can help teachers, librarians, and mental health professionals to more effectively address the needs of students combating mental illness.

FEATURES

Offers extensive analysis of contemporary young adult fiction to help teachers and mental health professionals make informed choices when selecting novels to study in their courses or to recommend to individual adolescents.

Examines the symptoms and warning signs of mental illness in adolescents in addition to how various disorders are diagnosed and treated.

Suggests strategies for incorporating texts into existing educational curricula and community initiatives aimed at confronting the stigma associated with mental illness.

Follows a standardized chapter format that makes it easy for readers to learn about the books and the mental illnesses they highlight.

Provides an extended list of resources at the end of each chapter that includes additional young adult fiction and nonfiction as well as adult fiction texts.

Kia Jane Richmond, PhD, is professor of English at Northern Michigan University, where she directs the English Education program. She was selected as the recipient of her university’s Excellence in Teaching Award in 2014.
